

Project Summary – Sales Analysis Dashboard

This project presents an interactive **Sales Analysis Dashboard** built in Excel, designed to monitor and evaluate key business performance metrics. The dashboard consolidates data from multiple sources and provides dynamic insights through **pivot tables, slicers, and visual charts**.

◆ Key Features:

- **KPIs at a Glance**
 - **Total Orders:** 1000
 - **Average Spending:** 3520.98
 - **Average Delivery Time:** 5.53 hours
 - **Total Revenue:** 352,098
- **Sales Performance Analysis**
 - **Monthly Sales Trends:** Visual representation of sales across months.
 - **Top 10 Products by Revenue:** Identifies the highest revenue-generating products.
 - **Top 10 Cities by Orders:** Highlights regions with maximum customer engagement.
 - **Peak Order Hours:** Displays time slots with highest customer activity.
 - **Product-Wise Sales Performance:** Comparison of sales for top 5 product categories.
 - **Occasion-Based Revenue Distribution:** Pie chart illustrating revenue share across occasions (Anniversary, Raksha Bandhan, Holi, Diwali, etc.).
- **Interactivity**
 - **Slicers for Products and Dates** enable users to filter results dynamically for specific occasions, quarters, or time periods.

◆ Insights Derived:

- Seasonal peaks are visible during festivals and special occasions.
- Certain products and cities consistently drive higher revenue.
- Delivery efficiency (average 5.53 hrs) reflects operational performance.
- Revenue distribution across occasions provides useful inputs for marketing campaigns.

✅ Outcome:

This Excel dashboard empowers decision-makers with a **comprehensive view of sales performance**, enabling them to identify trends, target profitable products, optimize delivery times, and enhance business strategies based on data-driven insights.
